

Named and Nameless Objects.

- Creating an Object using an Object reference is called named Object
- Whenever you want access any method of class and N. no.of. times then it is recommended to created named Object
- Nameless object is the process of creating an object of the class without using any reference
- Nameless Object is recommended whenever you want access only method of the class for only one time

class Test

```
{  
    void method1()  
    { System.out.println("Mtd- 1 of Test "); }  
  
    void method2()  
    { System.out.println("Mtd- 2 of Test "); }  
  
    public static void main(String args[ ])  
    {  
        Test t=new Test(); //Named Object  
        t.method1();  
        t.method2();  
        new Test().method1(); //Name less object  
        new Test().method2();  
    }  
}
```
